RX Biliary System™

A difference you can feel.™

The endoscope shows you the way, but it's your sense of touch that gets you where you need to go. The devices that make up the RX Biliary System have been developed to provide access and control with a sensation of device responsiveness that truly is... *a difference you can feel.*

Over the years, Boston Scientific has earned the confidence and allegiance of customers around the world who have adopted the RX Biliary System for everyday use. Our legacy of success in developing high performance RX biliary devices has enabled us to change the landscape of ERCP procedures. By innovating and refining products, we've put control and access right at your fingertips.

DEVICE CONTROL AND EFFICIENT ACCESS

Sphincterotome pre-loaded with Jagwire™ Guidewire:

- ◆ Designed to facilitate a smooth transition from over-the-wire to short-wire ERCP technique without removing devices from the endoscope
- ◆ Sphincterotomes available in 3.9F (1.30mm), 4.4F (1.47mm) and 4.9F (1.63mm)
- ◆ Pre-loaded to facilitate efficient cannulation
- ◆ Broad offering of 260cm and 450cm guidewire lengths in .035" (0.89mm) and .025" (0.69mm) available to meet physician preference for short-wire or traditional over-the-wire technique

MERGING LUMEN TECHNOLOGY™

Proximal lumens merge into a single distal lumen on RX 39 and 44 Sphincterotomes

- ◆ Developed to facilitate contrast injection whilst maintaining guidewire access through open lumen technology
- ◆ May help reduce the risk of submucosal injection by allowing contrast flow to be diverted

GUIDEWIRE DESIGN

Insulated guidewire may be left in place during sphincterotomy

- ◆ Kink-resistant, nitinol shaft engineered for wire control and manipulation capabilities
- ◆ Striped movement markers designed to indicate wire positioning during wire advancement and device exchange
- ◆ Endoglide™ Coating intended to promote smooth tracking and enhance tactile sensation

GUIDEWIRE TIP TECHNOLOGY

Engineered for tactile feedback

- ◆ 5cm hydrophilic tip is designed to facilitate duct access
- ◆ Designed to reduce tip impaction trauma during papillary cannulation
- ◆ Tungsten-filled tips provide fluoroscopic visualisation to help confirm access during device exchange

FLEXCONTROL SYSTEM*

Developed to aid in precise sphincterotomy

- ◆ Engineered to enhance guidewire manipulation and bowing control

TIP ORIENTATION

Ergonomic, rotating handle engineered for excellent control

- ◆ Designed to aid precise tip movement and wire manipulation to facilitate cannulation
- ◆ Handles labelled with respective tip outer diameter for ease of selection*
